

Watershed Group parameter file error

Posted by astewart - 2009/03/23 22:26

Hi all,

I combined four watersheds into a group and am having trouble getting the parameter file to write (error in ws.dialog.kinbatch.writepar a ...(error note off the title bar) (a(n) string object does not recognize request *)
).

The last entry written in the parameter file was:

BEGIN CHANNEL

ID = 54, PRINT = 3, FILE = e:path1path2agwa20090323simulationssim1\grp1_3.sim

LAT = 52 53

UP = 14 64

LEN = 2270.69, SLOPE = 0.0130, X = 575522.317, Y = 3500465.595

WIDTH = 15.77, 16.73, DEPTH = 0.59, 0.60

MAN = 0.035, SS1 = 1.00, SS2 = 1.00

WOOL = Yes

CV = 0.00, KSAT = 210, G = 101

DIST = 0.5450, POR = 0.4400, ROCK = 0.00

FR = 0.9000, 0.0500, 0.0500, SP = 63.00, COH = 0.0050

END CHANNEL

Any suggestions?

Thanks,

Anne
